### Application Note

Mixer is a three ports component with RF, LO and IF ports. Normally, a mixer can be used both up and down converter application. Take up converter for example:

#### General Balance Mixer

For general balance mixer,  $RF = LO \pm IF$ . There will be both high end  $LO+IF$  and Low End  $LO-IF$ . Take for example,  $IF=2GHz$ ,  $LO=40GHz$ , so there will be  $38GHz$  and  $42GHz$  at RF port with same power level.

Figure A: General Balance Mixer with Both High and Low Side Output

#### IQ Mixer used as side suppression Mixer

When  $IF=2GHz$ , 90 degree hybrid is used at IF port, when IF applies to Input 1 Port of hybrid, you will have high end frequency  $RF = LO + IF = 42GHz$ , while have side suppression (say  $-25dBc$ ) at Low end frequency  $38GHz$ . When you need low end frequency  $38GHz$ , and make side suppression for high end frequency  $42GHz$ , just applies IF to Input 2 of the hybrid.
