

110-170GHz Up-Converter, X8 on LO line Bench-top Test Equipment, WR-06

2022-10-1

Product Overview

AT-BTUC8F-110170 is 110-170GHz Up-converter with X8 frequency multiplier inside. The Up converter IF-RF conversion loss is -15dB.

The RF Port is with standard WR-06. LO input port and IF input port are SMA Female. Please note there will be both up and low band for the mixer. AT Microwave provides many kinds of filters if only one side is needed.

PDRO, Band Pass filter and Power amplifier can be integrated internally or externally according to request.

Part Number Selection Guide

Parameter	Value
Standard Part Number	Without Isolator at RF Port. Can be used as both Up-conver and Down-converter.
PN-ISO	Isolator integrated at RF Port to improve Return Loss and Isolation. Extra insertion loss added due to insertion loss of Isolator. Only be used for up-converter.

Application Note

Mixer is a three ports component with RF, LO and IF ports. Normally, a mixer can be used both up and down converter application. Take up converter for example:

General Balance Mixer

For general balance mixer, $RF=LO \pm IF$. There will be both high end $LO+IF$ and Low End $LO-IF$. Take for example, $IF=2GHz$, $LO=140GHz$, so there will be $138GHz$ and $142GHz$ at RF port with same power level.

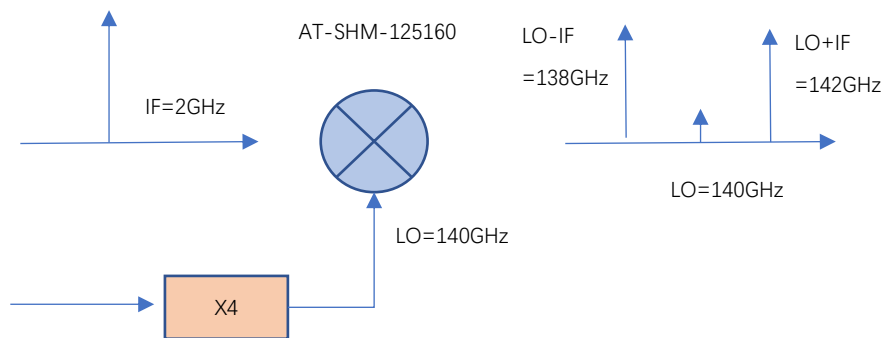

Figure A: General Balance Mixer with Both High and Low Side Output

IQ Mixer used as side suppression Mixer

When $IF=2GHz$, 90 degree hybrid is used at IF port, when IF applies to Input 1 Port of hybrid, you will have high end frequency $RF=LO+IF=142GHz$, while have side suppression (say $-15dBc$) at Low end frequency $138GHz$.

When you need low end frequency $138GHz$, and make side suppression for high end frequency $142GHz$, just applies IF to Input 2 of the hybrid.
